PROFESSIONAL SUMMARY

Aspiring Full Stack Web Developer progressing through a six-module Full Stack Web Development curriculum with freeCodeCamp, having completed the Responsive Web Design certification and the JavaScript curriculum. Builds and deploys practical, production-focused web projects using HTML5, CSS3, JavaScript, and Tailwind CSS, and maintains all source code on GitHub. Currently expanding into AI-assisted software development through WeThinkCode_'s Generative AI Course for Software Developers. Seeking an internship, junior, or entry-level software/web development role to apply proven front-end and JavaScript skills, contribute to real projects, and continue progressing toward full-stack proficiency.

TECHNICAL SKILLS

Languages & Web Development: HTML5, CSS3, JavaScript (ES6), Responsive Web Design

CSS & UI Frameworks: Flexbox, CSS Grid, Tailwind CSS, UI/UX principles, Design Systems

Tools & Workflow: Git, GitHub, GitHub Pages (deployment), Visual Studio Code, Browser Developer Tools

Practices: Accessibility-aware markup, responsive/mobile-first layout, reusable components, version control workflows

Current Focus: Full Stack Web Development (freeCodeCamp curriculum), Generative AI for Software Development (WeThinkCode_)

DEVELOPMENT EXPERIENCE

Student Software Developer — Independent / Self-Directed

2024 – Present

South Africa

- Progressing through a six-module Full Stack Web Development curriculum (freeCodeCamp); completed Responsive Web Design (certified) and the JavaScript curriculum.
- Design and build responsive, accessible, and interactive web interfaces using HTML5, CSS3, and JavaScript.
- Established and applied a formal design system (colour palette, typography scale, spacing, reusable components) prior to development on a multi-page corporate website project.
- Use Git and GitHub for version control, commit discipline, and public documentation of all project source code.
- Deploy completed projects as live websites via GitHub Pages and link each live demo to its source repository.
- Currently studying Generative AI application within software development through WeThinkCode_.

SELECTED PROJECTS

Elsha Trading Solution — Corporate Website

- Production-style corporate website for a South African electrical contracting company, built around a pre-established design system (colour palette, typography, spacing, reusable components) before any page development began.
- Implemented with HTML5, Tailwind CSS, and JavaScript across six sections (Home, About, Services, Projects, Team, Contact), with an emphasis on responsive design, accessibility, and SEO-friendly structure.
- Deployed as a live website; strongest evidence of production-quality, client-style development.

Live Demo: [In Progress] | GitHub: [In Progress]

Book Inventory App

- Interactive JavaScript web application demonstrating the transition from static/responsive interfaces to dynamic, logic-driven front-end development.
- Built with HTML, CSS, and JavaScript, including working application state and user interaction handling.

Live Demo: tshebwej7.github.io/book-inventory-app | GitHub: <https://github.com/tshebwej7/book-inventory-app>

SmartWatch Pro — Responsive Product Landing Page

- Responsive product landing page focused on structured layout, visual hierarchy, and user-focused interface design.
- Built with HTML5 and CSS3, applying Flexbox/Grid-based responsive layout techniques.

Live Demo: tshebwej7.github.io/SmartWatch-Pro-Landing-Page /

GitHub: <https://github.com/tshebwej7/SmartWatch-Pro-Landing-Page>

Python Technical Documentation

- Responsive technical documentation site with structured navigation and organised information architecture.
- Built with HTML and CSS, focused on readability and responsive layout across devices.

Live Demo: tshebwej7.github.io/python-technical-documentation /

GitHub: <https://github.com/tshebwej7/python-technical-documentation>

Developer Survey Form

- Responsive survey form demonstrating structured HTML forms, input validation elements, and usability-focused layout.

Live Demo: tshebwej7.github.io/developer-survey-form / GitHub: <https://github.com/tshebwej7/developer-survey-form>

EDUCATION & PROFESSIONAL DEVELOPMENT

Full Stack Web Development — Six-Module Curriculum

2024 – Present

freeCodeCamp

- Structured, project-based full-stack curriculum; completed modules: Responsive Web Design (certified) and JavaScript.
- Remaining modules in progress toward full-stack proficiency.

Generative AI Course for Software Developers

2026 – Present

WeThinkCode_

- Studying the practical application of Generative AI within modern software development workflows.

CERTIFICATION

Responsive Web Design Certification — freeCodeCamp |

[Certificate Issue April 2026] | [Credential URL: [Profile](#) | freeCodeCamp.org]

- Validates practical knowledge of HTML, CSS, responsive layout techniques, Flexbox, CSS Grid, and accessibility fundamentals.
